

# **Q INVENTORY SYSTEM**

**1.1.0**

**UPGRADE GUIDE**

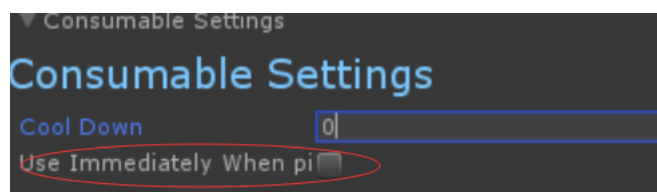

8/11/2017

## (1) Auto Change Sprite

Enable or disable this member will tell the editor whether to change the Sprite of the 2DGameObject once you changed the icon of the item or not.

## (2) Use Immediately when Picking up

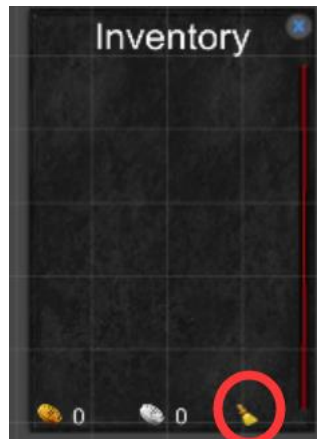

When you pick up an item, this one will tell the Inventory System to use it immediately or put it into the player's inventory.

(CoolDown must be zero if you want to set this member)

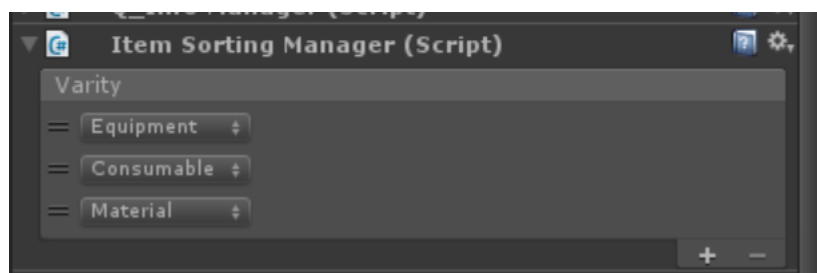

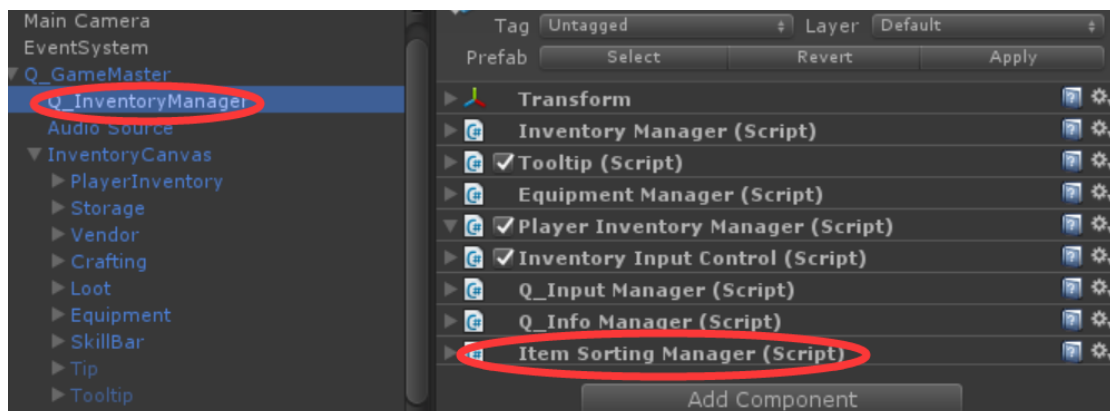

9/5/2017

### (3) Item Sorting(Unstable)

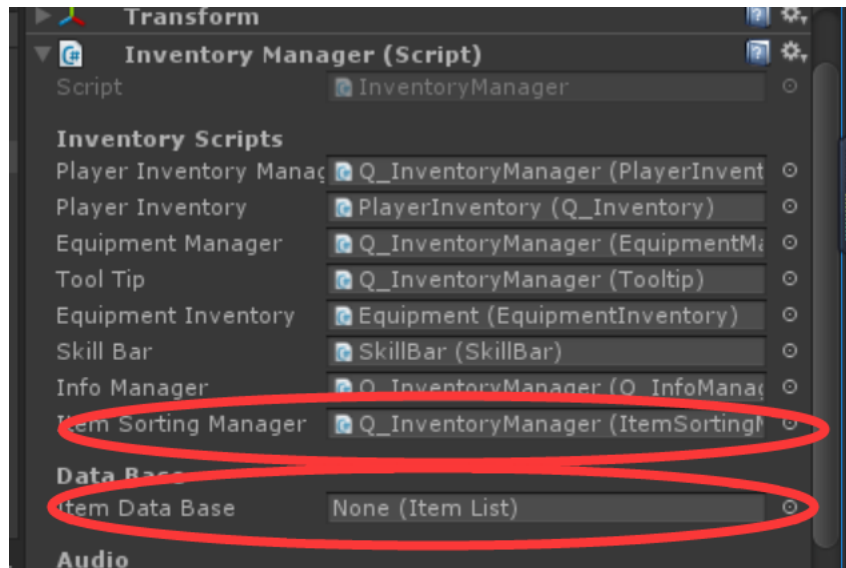

To use this function, first you need to set the order for the sort item.

(Q\_GameMaster->Q\_InventoryManager->ItemSortingManager)

Make sure you have assigned all the varieties here.

And if the database is empty, the variety will not appear.

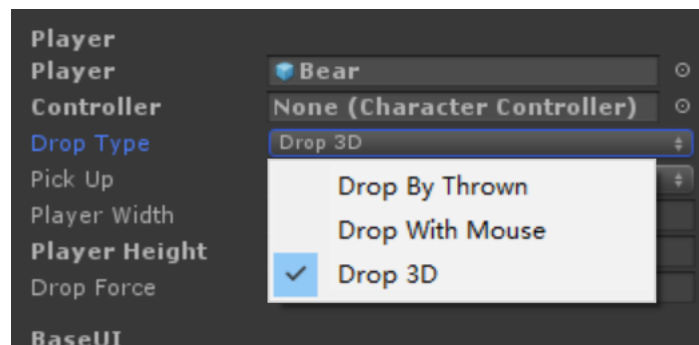

**(4) Free !!!!!!!!!!!!!!!!!!!!!!!**

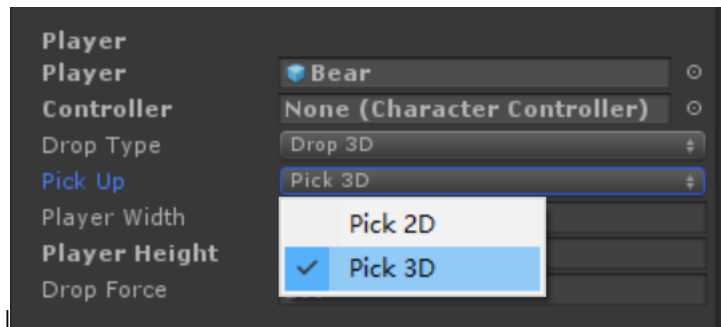

**9/26/2017**

**(5) 3D Support(Unstable)**

To use the 3D support, you must switch the Drop Type and Pick Up to 3D.

(Q\_GameMaster->Q\_InventoryManager->InventoryManager)

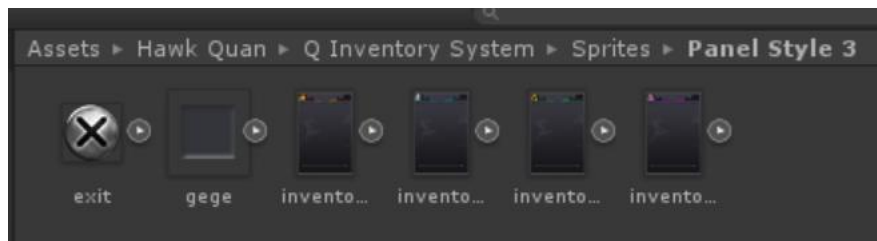

Then input a proper value for the Player Width.

(If you use CharacterController to control your player, drag it to the controller and the player height will not be used. If not, set the player height as the Player Width)

## (5) A New Inventory Skin Style

This style of panels is designed by **Adam Gu**, one of my classmates and good friends. Thanks for his help! You can find its display in the new 3D example scene.
